EDUCATION

Wilfred Laurier University

Waterloo, ON

Data science

Sep. 2024 - June 2028

EXPERIENCE

Software Developer & Data Analytics

July 2025 - Present

Toronto, ON, Canada

Teachtrack AI

- Developed data pipelines using Python, SQL, Flask, and HTML for the AI teaching assistant platform
- Built and managed user databases to support data-driven insights on learning behavior.
- Collaborated with engineers and educators to build an AI-powered teaching assistant that delivers personalized recommendations for teachers using statistical and predictive analytics.

Math Tutor
Sep 2024 – Present

Varsity Tutor Remote

- Explained complex mathematical and statistical concepts clearly to students, strengthening foundational knowledge essential for data analysis.
- Developed customized study plans based on students' performance data to optimize outcomes.
- Enhanced problem-solving and communication skills by breaking down abstract theories into practical examples, aiding comprehension and retention.

PROJECTS AND CERTIFICATIONS

Eventfinder | Python, Flask, React, PostgreSQL, Docker

Remote

- Integrated external APIs and real-time data filtering to display up-to-date event listings with search and category filters for enhanced user experience.
- **Developed a location-based event search platform** that enables users to discover real-time events nearby, leveraging geolocation and external APIs.
- Improved user engagement through responsive interface design, ensuring seamless cross-device access with clean and intuitive layouts.

Weather Predictor | Python, HTML, Panda, NumPy, Dask

Remote

- Built a predictive weather forecasting app that analyzes historical and real-time meteorological data to generate location-specific forecasts.
- Implemented machine learning models using tools like and Pandas to improve accuracy of temperature, precipitation, and wind predictions.
- Enhanced user experience with a responsive web interface, integrating real-time API data and visualizing forecasts through dynamic charts and clean layouts.

Fitness Tracker | Python, HTML, React, Typescript, API

Remote

- Developed a personalized fitness tracking app that records and analyzes users' past workouts to support
 progress tracking and performance insights.
- Leveraged Supabase for real-time database management, enabling secure storage and retrieval of user workout history with efficient query handling
- Implemented client-side state management and dynamic rendering, ensuring seamless user interaction with historical workout data and real-time updates.

TECHNICAL SKILLS AND CERTIFICATIONS

Certificates: Harvard CS50

Languages: Java, Python, C/C++, SQL (Postgres), JavaScript, HTML/CSS, R Frameworks: React, Node.js, Flask, JUnit, WordPress, Material-UI, FastAPI

Libraries: pandas, NumPy, Matplotlib
